DETAILED ACTION

Claim Objections

Claim 6 is objected to because of the following informalities: claim 6 is a maximum power point tracking device dependent on a method of maximum power point tracking, for examination purposes, claim 6 is dependent on claim 5. Appropriate correction is required.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-8 are rejected under 35 U.S.C. 102(b) as being anticipated by U.S. Patent No. 6,031,736 to Takehara et al..

Regarding claims 1, 3, 5 and 7, Takehara et al. disclose a maximum power control device and method for a solar cell including a circuit for performing low-frequency, minute modulation that alternately switches input voltage of the switching converter between two voltage values (column 1 lines 61-67, column 2 lines 1-12, column 4 lines 35-43), a circuit that detects an output current value of the direct-current power source/solar cell and has an amplification factor switching function that switches the amplification factor between definite magnitudes synchronizing with the aforementioned minute modulation (column 7 lines 37-51), a discriminator circuit for obtaining a component synchronized with the aforementioned minute modulation of the output circuit (column 4 lines 27-35) and a circuit that uses the output of the

Art Unit: 2858

discriminator circuit to generate a signal that is also input to a switching converter control circuit (column 4 lines 35-43).

Regarding claims 2,4, 6 and 8, Takehara et al. disclose a circuit that limits the input voltage of the switching converter to a predetermined range (column 2 lines 4-12).

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The following is cited to further show the state of the art with respect to a maximum power control devices and methods in general:

U.S. Patent No. 6,433,522 to Siri discloses a fault tolerant maximum power tracking solar power system.

U.S. Patent No. 5,493,204 to Caldwell discloses a peak power tracker including a solar cell source.

U.S. Patent No. 4,794,272 to Bavaro et al. disclose a maximum power tracking solar power system.
